
Enterprise Data Architecture Definitions

A textual representation of the Enterprise Data Architecture

DATA DEFINITIONS

The data definitions provide comprehensive definitions for data subjects and data characteristics. Each data subject and data characteristic is defined only once within the common data architecture. Each instance of a data subject or data characteristic uses that common definition. This approach prevents redundant and inconsistent data definitions.

Entity

1. 'Entity' sectionEntity TableEntity	
Name	Definition
Access Profile	An Access Profile describes an Information System Transaction and the Security Group which can access it.
Access Profile Permission	Access Profile Permission is a security right that is the granted authority associated with a particular Security Group accessing a specific Information System Transaction through a specific Access Profile.
Address	An Address is a location where a person can be contacted directly or indirectly. Address Type specifies the particular type of Address. Address does not include any form of electronic contact. These are electronic contacts are specified in Electronic Contact. An Address can play many different roles as specified in Address Role. Note that it has not been determined whether Address will contain its own history or an Address History data subject will be created.
Address Role	An Address may serve many uses by one or more Organizations or Persons and an Organization or Person can have many different Addresses. Address Role identifies the specific use of an Address by either an Organization or a Person. Address Role Type identifies the specific type of role played by an Address Role. Address Role contains only currently effective data occurrences. Address Role data occurrences that have become ineffective are moved to Address Role History.
Address Role Type	An Address Role can be one of several types of roles, such as for mailing, contact, billing, and so on. Address Role Type is a reference table that identifies each of the types of roles that an Address Role can play. Address Role Type contains its own history.
Address Type	An Address can be of several different types, such as a physical address, a post office box, and APO or FPO address, and so on. Address Type is a reference table that identifies each type of Address. Address Type contains its own history.
Address Unit Type	An Address can contain many units, such as apartments in an apartment house or suites in an office building. Address Unit Type is a reference table that identifies each type of address unit. Address Unit Type contains its own history.
Census Block	A Census Block is a contiguous area defined by the U.S. Census Bureau for collecting census data. A Census Block is a subset of a Census Block Group. A Census Block is the lowest level in the hierarchy of census area definitions. It is the smallest enumeration district determined by the U.S. Census Bureau. In a City, a Census Block is usually a city block.
Census Block Group	A Census Block Group is a contiguous area defined by the U.S. Census Bureau. A Census Block Group contains many Census Blocks and is a subdivision of a Census Tract. It is the next to lowest level in the hierarchy of census area designations.
Census Tract	A Census Tract is a contiguous area defined by the U.S. Census Bureau. A Census Tract contains many Census Block Groups. It is a major enumeration district containing 2,500 to 8,000 people determined by the U.S. Census Bureau. Census Tract boundaries follow streets, rivers, railroads, city boundaries, and major land marks.
Citizenship Type	A Person can have different types of citizen relationships with the United States, such as a citizen, alien or working alien with a work visa. Citizenship Type is a reference table that identifies each type of citizenship in the United States. Citizenship Type contains its own history.
City	A City is a geographic area representing a center of population, commerce, and culture that has definite boundaries, and may be incorporated with legal powers granted by the State. City contains

1. 'Entity' sectionEntity TableEntity	
Name	Definition
	its own history.
Country	A Country is a geographic area representing a territory with specific boundaries that is sovereign and recognized as a separate and distinct nation in its own right. A Country may also be referred to as a nation-state. Country contains its own history.
County	A County is a geographic area with definite boundaries representing the largest territorial division for local government within a State in the United States. A County may also be the largest local administrative unit in some countries. County contains its own history.
Digital Certificate	A Digital Certificate is a digital document, which is generally stored and administered in a central directory. It is issued by a certification authority (CA). It contains your name, a serial number, expiration dates, a copy of the certificate holder's public key (used for encryption messages and digital signature), and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Some digital certificates conform to a standard, X.509. Digital certificates can be kept in registries so that authentication users can look up other users' public keys.
E-Government Customer	An E-Government Customer is a person of any age who may or may not be a resident of Arkansas who wishes to interact electronically with the State of Arkansas. Transactions may be business transactions or simple access to view information. An E-Government Customer may conduct electronic business on behalf of a person for whom they have guardianship or power of attorney. E-Government Customers must be authenticated by the State. The level of authorization will vary based on the type of transactions the E-Government Customer requires access to. Examples include: State employee, vendors, taxpayers, students, tourists
Electronic Contact	A Person or Organization can have many different means for electronic contact, such as e-mail, phone, pager, and so on. Electronic Contact specifies the means by which a Person or Organization can be contacted electronically. Electronic Contact Type specifies the type of electronic contact. Note that it has not been determined whether Data Steward will contain its own history or a Data Steward History data subject will be created.
Electronic Contact Type	An Electronic Contact can be many different types, such as cellular phone, work phone, home phone, fax phone, email address, web address, and so on. Electronic Contact Type is a reference table that specifies the types of Electronic Contact. Electronic Contact Type contains its own history.
E-Mail	The E-Mail is the Uniform Resource Locator (URL) address for contacting a Person or Organization through the Internet.
Federal Tax Category	Federal Tax Category is a reference table that specifies the various federal tax categories that an Organization may have. This reference table does not include any state tax categories. Federal Tax Category contains its own history.
Gender	Gender is a reference table that specifies the various genders that a Person may have, such as male or female. Note that 'gender' is more culturally acceptable than 'sex'. Gender contains its own history.
Information System	An Information System is software used to perform a specific business function for an E-government Customer. Software may include purchased software or DIS or other State developed software application. It may include software designed to carry out a business function such as AWIS or software designed to control access such as an LDAP directory service.
Information System Component	An Information System Component is part of an Information System that performs a specific business activity within the State, such as a transaction. An Information System Component contains its own history.
Internet	The Internet is the Uniform Resource Locator (URL) address for

Name	Definition
	contacting a Person or Organization through the Internet.
Marital Status	Marital Status is a reference table designating the various marital statuses that are allowed within the state, such as single, divorced, married, and so on. Marital Status contains its own history.
Organization	An Organization is an administrative and functional structure, such as a business or a political party, and the personnel forming such a structure. It may be an established legal entity or an informal association of individuals. An Organization may have relationships to other Organizations or to Persons, which are identified in Person Organization Relationship. Note that it has not been determined whether Organization will contain its own history or an Organization History data subject will be created.
Organization Category	Organization Category is a reference table that designates the category of an Organization, such as a Federal Agency, State Agency, Private Organization, Public Utility, and so on. Organization Category contains its own history.
Organization Type	Organization Type is a reference table that designates the broad function that an Organization performs, such as School, Agency, Health Care, and so on. Organization Type contains its own history.
Permission	Permission is a security right that describes the authority granted to access an Information System Transaction.
Person	An Person is an individual human being as distinguished from an animal or thing. A Person may be living, deceased, or unborn, and is recognized by law as the subject of rights and duties. A Person may have a relationship with another Person or an Organization as identified in Person Organization Relationship. Note that it has not been determined whether Person will contain its own history or a Person History data subject will be created.
Person Name	A Person may have more than one name for a variety of different reasons. Person Name uniquely identifies each of those different names. Person Name contains its own history.
Person Name Type	A Person Name can result from a specific circumstance, such as legal name, alias name, and so on. Person Name Type designates the circumstance leading to a Person Name. Person Name Type contains its own history.
Person Organization Relationship	A Person may have a relationship with another Person, an Organization may have a relationship with another Organization, and a Person may have a relationship with an Organization. Person Organization Relationship identifies the specific relationships between Persons and Organizations. It does not apply to the employment of Persons by the State of Arkansas. That employment is defined in Position Assignment. The history is contained in Person Organization Relationship History.
Person Organization Relationship Type	Person Organization Relationship Type is a reference table that designates the types of relationships between Persons and Organizations, such as marriages, employment, legal agreements, and so on. Person Organization Relationship Type contains its own history.
Phone	The phone information for contacting a person through voice, pager, text message, and so on.
Race	Race is a reference table designating the acceptable race categories for a Person. Note that there is a difference between Race representing biological dependency and Ethnicity representing cultural dependency. Race contains its own history.
Relationship	A Relationship is an association between a person and an organization, two people or two organizations. A person may interact with other persons or organizations through a relationship with another person or organization.
Security Group	Security Group identifies a common function for which one or more E-Government Customers share a need for a common set of Access Permissions to a given Information System.
Security Group Member	A Security Group Member is an E-Government Customer that is

Name	Definition
	associated with a particular security group that has access rights for a particular Information System.
State	A State is a geographic area forming one of the constituent units of a nation having a federal government. It represents a politically organized body of people occupying a definite territory that is sovereign. A State can be a state in the United States, a Province in Canada, or any similar organization in other countries. State contains its own history.

Attribute(s) of "Access Profile" EntityAttribute(s) of "Access Profile" Entity	
Name	Definition
Access Profile Identifier	A system generated number used to uniquely identify an entity. (ID)
Security Group ID	A system generated number used to uniquely identify an entity. (ID)
Information System Identifier	A system generated number used to uniquely identify an entity. (ID)
Information System Component Identifier	A system generated number used to uniquely identify an entity. (ID)

Attribute(s) of "Access Profile Permission" EntityAttribute(s) of "Access Profile Permission" Entity	
Name	Definition
Permission Identifier	A system generated number used to uniquely identify an entity. (ID)
Access Profile Identifier	A system generated number used to uniquely identify an entity. (ID)
Access Profile Permission Begin Date	Access Profile Permission Begin Date is the business date that the access profile permission became effective, such as 'January 15, 1987'.
Access Profile Permission End Date	Access Profile Permission End Date is the business date that the access profile permission is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Address" EntityAttribute(s) of "Address" Entity	
Name	Definition
Address Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Address.
Address Unit Type Code	A code uniquely identifying an Address Unit Type.
Address Type Code	A code uniquely identifying an Address Type.
Census Block Number	The number of a Census Block assigned by the U.S. Census Bureau. Census Block Numbers are unique only within their parent Census Block Group.
Census Block Group Number	The number of a Census Block Group assigned by the U.S. Census Bureau. Census Block Group. Numbers are unique only within their parent Census Tract.
Census Tract Number	The unique number of a Census Tract assigned by the U.S. Census Bureau. The Census Tract. Number consists of a 4-digit body and a 2-digit suffix.
State FIPS Code	The Federal Information Processing System (FIPS) code for a State.
Country FIPS Code	The Federal Information Processing System (FIPS) code for a Country.
City Identifier	The system-assigned identifier in the primary repository that uniquely identifies a City.
County Identifier	The system-assigned identifier in the primary repository that uniquely identifies a County.
Address Begin Date	The business date that the Address became effective, such as 'January 15, 1987'.
Address End Date	The business date after which the Address is no longer effective, such as 'December 12, 1992'.
Address Latitude Degree Decimals	The Address. Latitude as specified in degrees and decimal equivalents of a degree representing minutes and seconds, such as '47.4162'.

Attribute(s) of "Address" EntityAttribute(s) of "Address" Entity	
Name	Definition
Address Longitude Degree Decimals	The Address. Longitude as specified in degrees and decimal equivalents of a degree representing minutes and seconds, such as '123.8749'.
Address Street Name Complete	The Street Name Complete contains the basic street name, the Street Direction Type. Code Prefix or Street Direction Type. Code Suffix, and the Street Style Type, such as 'Montgomery Boulevard SW' or 'N Holiday Valley Road'.
Address Unit Identifier	An Address can contain many units, such as apartments, trailer court spaces, or office suites. The Unit Identifier identifies the specific unit within a complex that contains many address units, such as 'Space C' or 'Suite 43'.
Address Zip Code Base	The basic 5-digit Zip Code for an Address in the United States, such as '98507'.
Address Zip Code Suffix	The extended 4-digit Zip Code for an Address in the United States, such as '1412'.

Attribute(s) of "Address Role" EntityAttribute(s) of "Address Role" Entity	
Name	Definition
Address Role Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Address Role.
Address Identifier	A system generated number used to uniquely identify an entity. (ID)
Address Role Type Code	An address type code is the representation that uniquely identifies an address type. Examples include physical business, mailing, etc. use for entity.
Address Role Description	The comprehensive definition of an Address Role.
Address Role Begin Date	The business date that the Address Role became effective, such as 'January 15, 1987'.
Address Role End Date	The business date after which the Address Role is no longer effective, such as 'December 12, 1992'.
Organization Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Organization.
Person Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.

Attribute(s) of "Address Role Type" EntityAttribute(s) of "Address Role Type" Entity	
Name	Definition
Address Role Type Code	An address type code is the representation that uniquely identifies an address type. Examples include physical business, mailing, etc. use for entity.
Address Role Type Name	The formal name of an Address Role Type.
Address Role Type Definition	The comprehensive definition of an Address Role Type.
Address Role Type Begin Date	The Calendar date on which an address role type becomes effective.
Address Role Type End Date	The Calendar date on which an address role type becomes ineffective.

Attribute(s) of "Address Type" EntityAttribute(s) of "Address Type" Entity	
Name	Definition
Address Type Code	A code uniquely identifying an Address Type.
Address Type Name	The formal name of an Address Type.
Address Type Definition	The comprehensive definition of an Address Type.
Address Type Begin Date	The business date that the Address Type became effective, such as 'January 15, 1987'.
Address Type End Date	The business date after which the Address Type is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Address Unit Type" EntityAttribute(s) of "Address Unit Type" Entity	
Name	Definition
Address Unit Type Code	A code uniquely identifying an Address Unit Type.
Address Unit Type Name	The formal name of an Address Unit Type.
Address Unit Type Definition	The comprehensive definition of an Address Unit Type.
Address Unit Type Begin Date	The business date that the Address Unit Type became effective,

Attribute(s) of "Address Unit Type" Entity	
Name	Definition
	such as 'January 15, 1987'.
Address Unit Type End Date	The business date after which the Address Unit Type is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Census Block" Entity	
Name	Definition
Census Block Number	The number of a Census Block assigned by the U.S. Census Bureau. Census Block Numbers are unique only within their parent Census Block Group.
Census Block Group Number	The number of a Census Block Group assigned by the U.S. Census Bureau. Census Block Group. Numbers are unique only within their parent Census Tract.
Census Tract Number	The unique number of a Census Tract assigned by the U.S. Census Bureau. The Census Tract. Number consists of a 4-digit body and a 2-digit suffix.
Census Block Name	The unique name of a Census Block assigned by the U.S. Census Bureau.

Attribute(s) of "Census Block Group" Entity	
Name	Definition
Census Block Group Number	The number of a Census Block Group assigned by the U.S. Census Bureau. Census Block Group. Numbers are unique only within their parent Census Tract.
Census Tract Number	The unique number of a Census Tract assigned by the U.S. Census Bureau. The Census Tract. Number consists of a 4-digit body and a 2-digit suffix.
Census Block Group Name	The unique name of a Census Block Group assigned by the U.S. Census Bureau.

Attribute(s) of "Census Tract" Entity	
Name	Definition
Census Tract Number	The unique number of a Census Tract assigned by the U.S. Census Bureau. The Census Tract. Number consists of a 4-digit body and a 2-digit suffix.
Census Tract Name	The unique name of a Census Tract assigned by the U.S. Census Bureau.

Attribute(s) of "Citizenship Type" Entity	
Name	Definition
Citizenship Type Code	A code uniquely identifying a Citizenship Type.
Citizenship Type Name	The formal name of a Citizenship Type.
Citizenship Type Definition	The comprehensive definition of an Citizenship Type.
Citizenship Type Begin Date	The business date that the Citizenship Type became effective, such as 'January 15, 1987'.
Citizenship Type End Date	The business date after which the Citizenship Type is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "City" Entity	
Name	Definition
City Identifier	The system-assigned identifier in the primary repository that uniquely identifies a City.
City Name	The legal name of a City, such as 'The City of San Francisco'. This is not the common name of a City.

Attribute(s) of "Country" Entity	
Name	Definition
Country FIPS Code	The Federal Information Processing System (FIPS) code for a Country.
Country Name	The legal name of a Country, such as 'The United States of America'.

Attribute(s) of "County" Entity	
Name	Definition
County Identifier	The system-assigned identifier in the primary repository that uniquely identifies a County.
County Name	The legal name of a County, such as 'The County of Thurston'.

Attribute(s) of "Digital Certificate" Entity	
Name	Definition
Digital Certificate Identifier	A system generated number used to uniquely identify an entity. (ID)
E-Government Customer Identifier	A system generated number used to uniquely identify an entity. (ID)
Digital Certificate Source	Digital Certificate Source indicates the issuing authority in a network that issues and manages security credentials and public keys for message encryption.

Attribute(s) of "E-Government Customer" Entity	
Name	Definition
E-Government Customer Identifier	A system generated number used to uniquely identify an entity. (ID)
Person Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.
Relationship Identifier	A system generated number used to uniquely identify an entity. (ID)
Single Sign On User Name	<p>Single Sign On User Name is a User Name that is used to access the State of Arkansas Single Sign On system.</p> <p>A User Name is a unique symbol or character string, distinct from the password, that is required for logging on to a multi-user system, bulletin board system, local area network[LAN], or online service to identify a specific user. Also this is called login name, and User ID.</p>
Single Sign On Password	<p>Single Sign On Password is a Password that is used to access the State of Arkansas Single Sign On system.</p> <p>A Password is a secret sequence of characters that is used as an access code for a file, program, computer, or network. All authorized users have a password; no one else can gain access to the file, program, computer, or network in question. To maintain security, some systems ask users to change their passwords on a regular basis.</p>

Attribute(s) of "Electronic Contact" Entity	
Name	Definition
Electronic Contact Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Electronic Contact.
Electronic Contact Begin Date	The business date that the Electronic Contact became effective, such as 'January 15, 1987'.
Electronic Contact End Date	The business date after which the Electronic Contact is no longer effective, such as 'December 12, 1992'.
Electronic Contact Type Code	A code uniquely identifying an Electronic Contact Type, such as 'F' for 'Fax'
Organization Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Organization.
Person Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.

Attribute(s) of "Electronic Contact Type" Entity	
Name	Definition
Electronic Contact Type Code	A code uniquely identifying an Electronic Contact Type, such as 'F' for 'Fax'
Electronic Contact Type Name	The formal name of an Electronic Contact Type, such as 'Fax'.
Electronic Contact Type Definition	The comprehensive definition of an Electronic Contact Type.
Electronic Contact Type Begin Date	The business date that the Electronic Contact Type became effective, such as 'January 15, 1987'.
Electronic Contact Type End Date	The business date after which the Electronic Contact Type is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "E-Mail" Entity	
Name	Definition
Electronic Contact Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Electronic Contact.
E-Mail Address	The E-Mail Address is the Uniform Resource Locator (URL) for contacting a Person through the Internet.

Attribute(s) of "Federal Tax Category" Entity	
Name	Definition
Federal Tax Category Code	A code uniquely identifying Federal Tax Category.
Federal Tax Category Name	The formal name of a Federal Tax Category.
Federal Tax Category Definition	The comprehensive definition of a Federal Tax Category.
Federal Tax Category Begin Date	The business date that the Federal Tax Category became effective, such as 'January 15, 1987'.
Federal Tax Category End Date	The business date after which the Federal Tax Category is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Gender" Entity	
Name	Definition
Gender Code	A code uniquely identifying a Gender, such as 'M' for 'Male'.
Gender Name	The formal name of a Gender, such as 'Male'.
Gender Definition	The comprehensive definition of a Gender.
Gender Begin Date	The business date that the Gender became effective, such as 'January 15, 1987'.
Gender End Date	The date after which the Gender is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Information System" Entity	
Name	Definition
Information System Identifier	A system generated number used to uniquely identify an entity. (ID)
Information System Name	Information System Name is the common means used to identify an Information System. It is usually an English phrase or an acronym developed from an English phrase.

Attribute(s) of "Information System Component" Entity	
Name	Definition
Information System Component Identifier	A system generated number used to uniquely identify an entity. (ID)
Information System Identifier	A system generated number used to uniquely identify an entity. (ID)
Information System Component Name	The formal name of an Information System Component, such as ...Payroll Transaction HR01.
Information System Component Description	The comprehensive definition of an Information System Component.

Attribute(s) of "Internet" Entity	
Name	Definition
Electronic Contact Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Electronic Contact.
Internet Address	The Internet Address is the Uniform Resource Locator (URL) for

Attribute(s) of "Internet" EntityAttribute(s) of "Internet" Entity	
Name	Definition
	contacting a Person or Organization through the Internet.

Attribute(s) of "Marital Status" EntityAttribute(s) of "Marital Status" Entity	
Name	Definition
Marital Status Code	A code uniquely identifying a Marital Status, such as 'D' for Divorce.
Marital Status Name	The Marital Status Name refers to a person either being married, divorced or claims to be single.
Marital Status Definition	The Marital Status Definition is the defining the person as being married or not.
Marital Status Begin Date	The Begin Date refers to the the Date that a person begins being married, divorced or date that a person claims to be single.
Marital Status End Date	The End Date refers to the the Date that a person ends being married, divorced or date that a person claims to be single.

Attribute(s) of "Organization" EntityAttribute(s) of "Organization" Entity	
Name	Definition
Organization Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies an Organization.
Organization Type Code	A code uniquely identifying an Organization Type.
Federal Tax Category Code	A code uniquely identifying Federal Tax Category.
Organization Category Code	A code uniquely identifying an Organization Category.
Organization Acronym	The common acronym for an organizations, such as 'IBM' for 'International Business Machines'.
Organization Begin Date	The business date that the Organization was established, such as 'January 15, 1987'.
Organization End Date	The business date after which the Organization is no longer in existence, such as 'December 12, 1992'.
Organization Federal Tax Identification Number	The Organization Federal Tax Identification Number is the Federal assigned identifier for an Organization. This is not the Social Security Number for the Organization. Note that many Organizations do not have a Federal Tax Identification Number.
Organization Legal Name	The legal name of an organization, such as 'The Boeing Commercial Airplane Company'.
Organization Social Security Number	The Federal assigned Social Security Number for an Organization, which may also be referred to as the Social Security Account Number. This is not the Federal Identifier for the Organization. Not that many Organizations do not have a Social Security Number.
Organization Relationship ID	The system-assigned identifier in the primary repository for the State that uniquely identifies an Organization.

Attribute(s) of "Organization Category" EntityAttribute(s) of "Organization Category" Entity	
Name	Definition
Organization Category Code	A code uniquely identifying an Organization Category.
Organization Category Name	The formal name of an Organization Category.
Organization Category Definition	The comprehensive definition of an Organization Category.
Organization Category Begin Date	The business date that the Organization Category became effective, such as 'January 15, 1987'.
Organization Category End Date	The business date after which the Organization Category is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Organization Type" EntityAttribute(s) of "Organization Type" Entity	
Name	Definition
Organization Type Code	A code uniquely identifying an Organization Type.
Organization Type Name	The formal name of an Organization Type.
Organization Type Definition	The comprehensive definition of an Organization Type.
Organization Type Begin Date	The business date that the Organization Type became effective, such as 'January 15, 1987'.
Organization Type End Date	The business date after which the Organization Date is no longer effective, such as 'December 12, 1992'.

Attribute(s) of "Permission" Entity	
Name	Definition
Permission Identifier	A system generated number used to uniquely identify an entity. (ID)
Permission Name	Permission Name is a word or words by which a particular security access is designated or described. Common examples of Permission Name are: Create Read Update Delete

Attribute(s) of "Person" Entity	
Name	Definition
Person Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.
Marital Status Code	A code uniquely identifying a Marital Status, such as 'D' for Divorce.
Gender Code	A code uniquely identifying a Gender, such as 'M' for 'Male'.
Race Code	A code uniquely identifying a Race, such as 'C' for 'Caucasian'.
Citizenship Type Code	A code uniquely identifying a Citizenship Type, such as Alien, or Citizen.
Person Birth Date	The business date that the Person was born as shown by a legal document or other reliable source.
Person Deceased Date	The business date that the Person deceased as shown by a legal document or other reliable source.
Social Security Number	The Federal assigned Social Security Number for an person, which may also be referred to as the Social Security Account Number.
Driver's License Number	Driver's License Number refers to the driver's license recieved from the state from which a person resides.
Person Relationship ID	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.

Attribute(s) of "Person Name" Entity	
Name	Definition
Person Name Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person Name.
Person Identifier	The system-assigned identifier in the primary repository for the State that uniquely identifies a Person.
Person Name Type Code	A code uniquely identifying a Person Name Type.
Person Name Family Name	The family name of the Person. This data characteristic is often referred to as the person's last name. However, there are naming conventions where the person's first name may be their family name or their last name may be their family name. Therefore, the term 'family name' is used to prevent any confusion. A Person may have a hyphenated family name, such as Smith-Jones. This hyphenated name is that person's family name.
Person Name Individual Name	The individual name of the Person. This data characteristic is often referred to as the person's first name. However, there are naming conventions where the person's first name may be their individual name or their last name may be their individual name. Therefore, the term 'individual name' is used to prevent any confusion. This data characteristic may also be referred to as the person's given name. However, both a person's individual name and their middle name are given names. Therefore, the term 'individual name' is used to prevent any confusion.
Person Name Maiden Name	The maiden name of the Person prior to any marriage. The maiden name is typically the person's family name prior to any marriage.
Person Name Middle Name	The middle name of the Person. A person may have multiple middle names, such as 'John Paul Jones Smith'. All of those middle names are included, such as 'Paul Jones'.
Person Name Name Prefix	The prefix to a Person Name, such as Mr., Mrs., Miss, and so on.
Person Name Nickname	The nickname of a person, such as 'Shorty', or 'Buck'. The nickname is not a person's legal name, but is acquired during their lifetime.
